

Hydrogen Capability at the University of Adelaide

THE UNIVERSITY of ADELAIDE

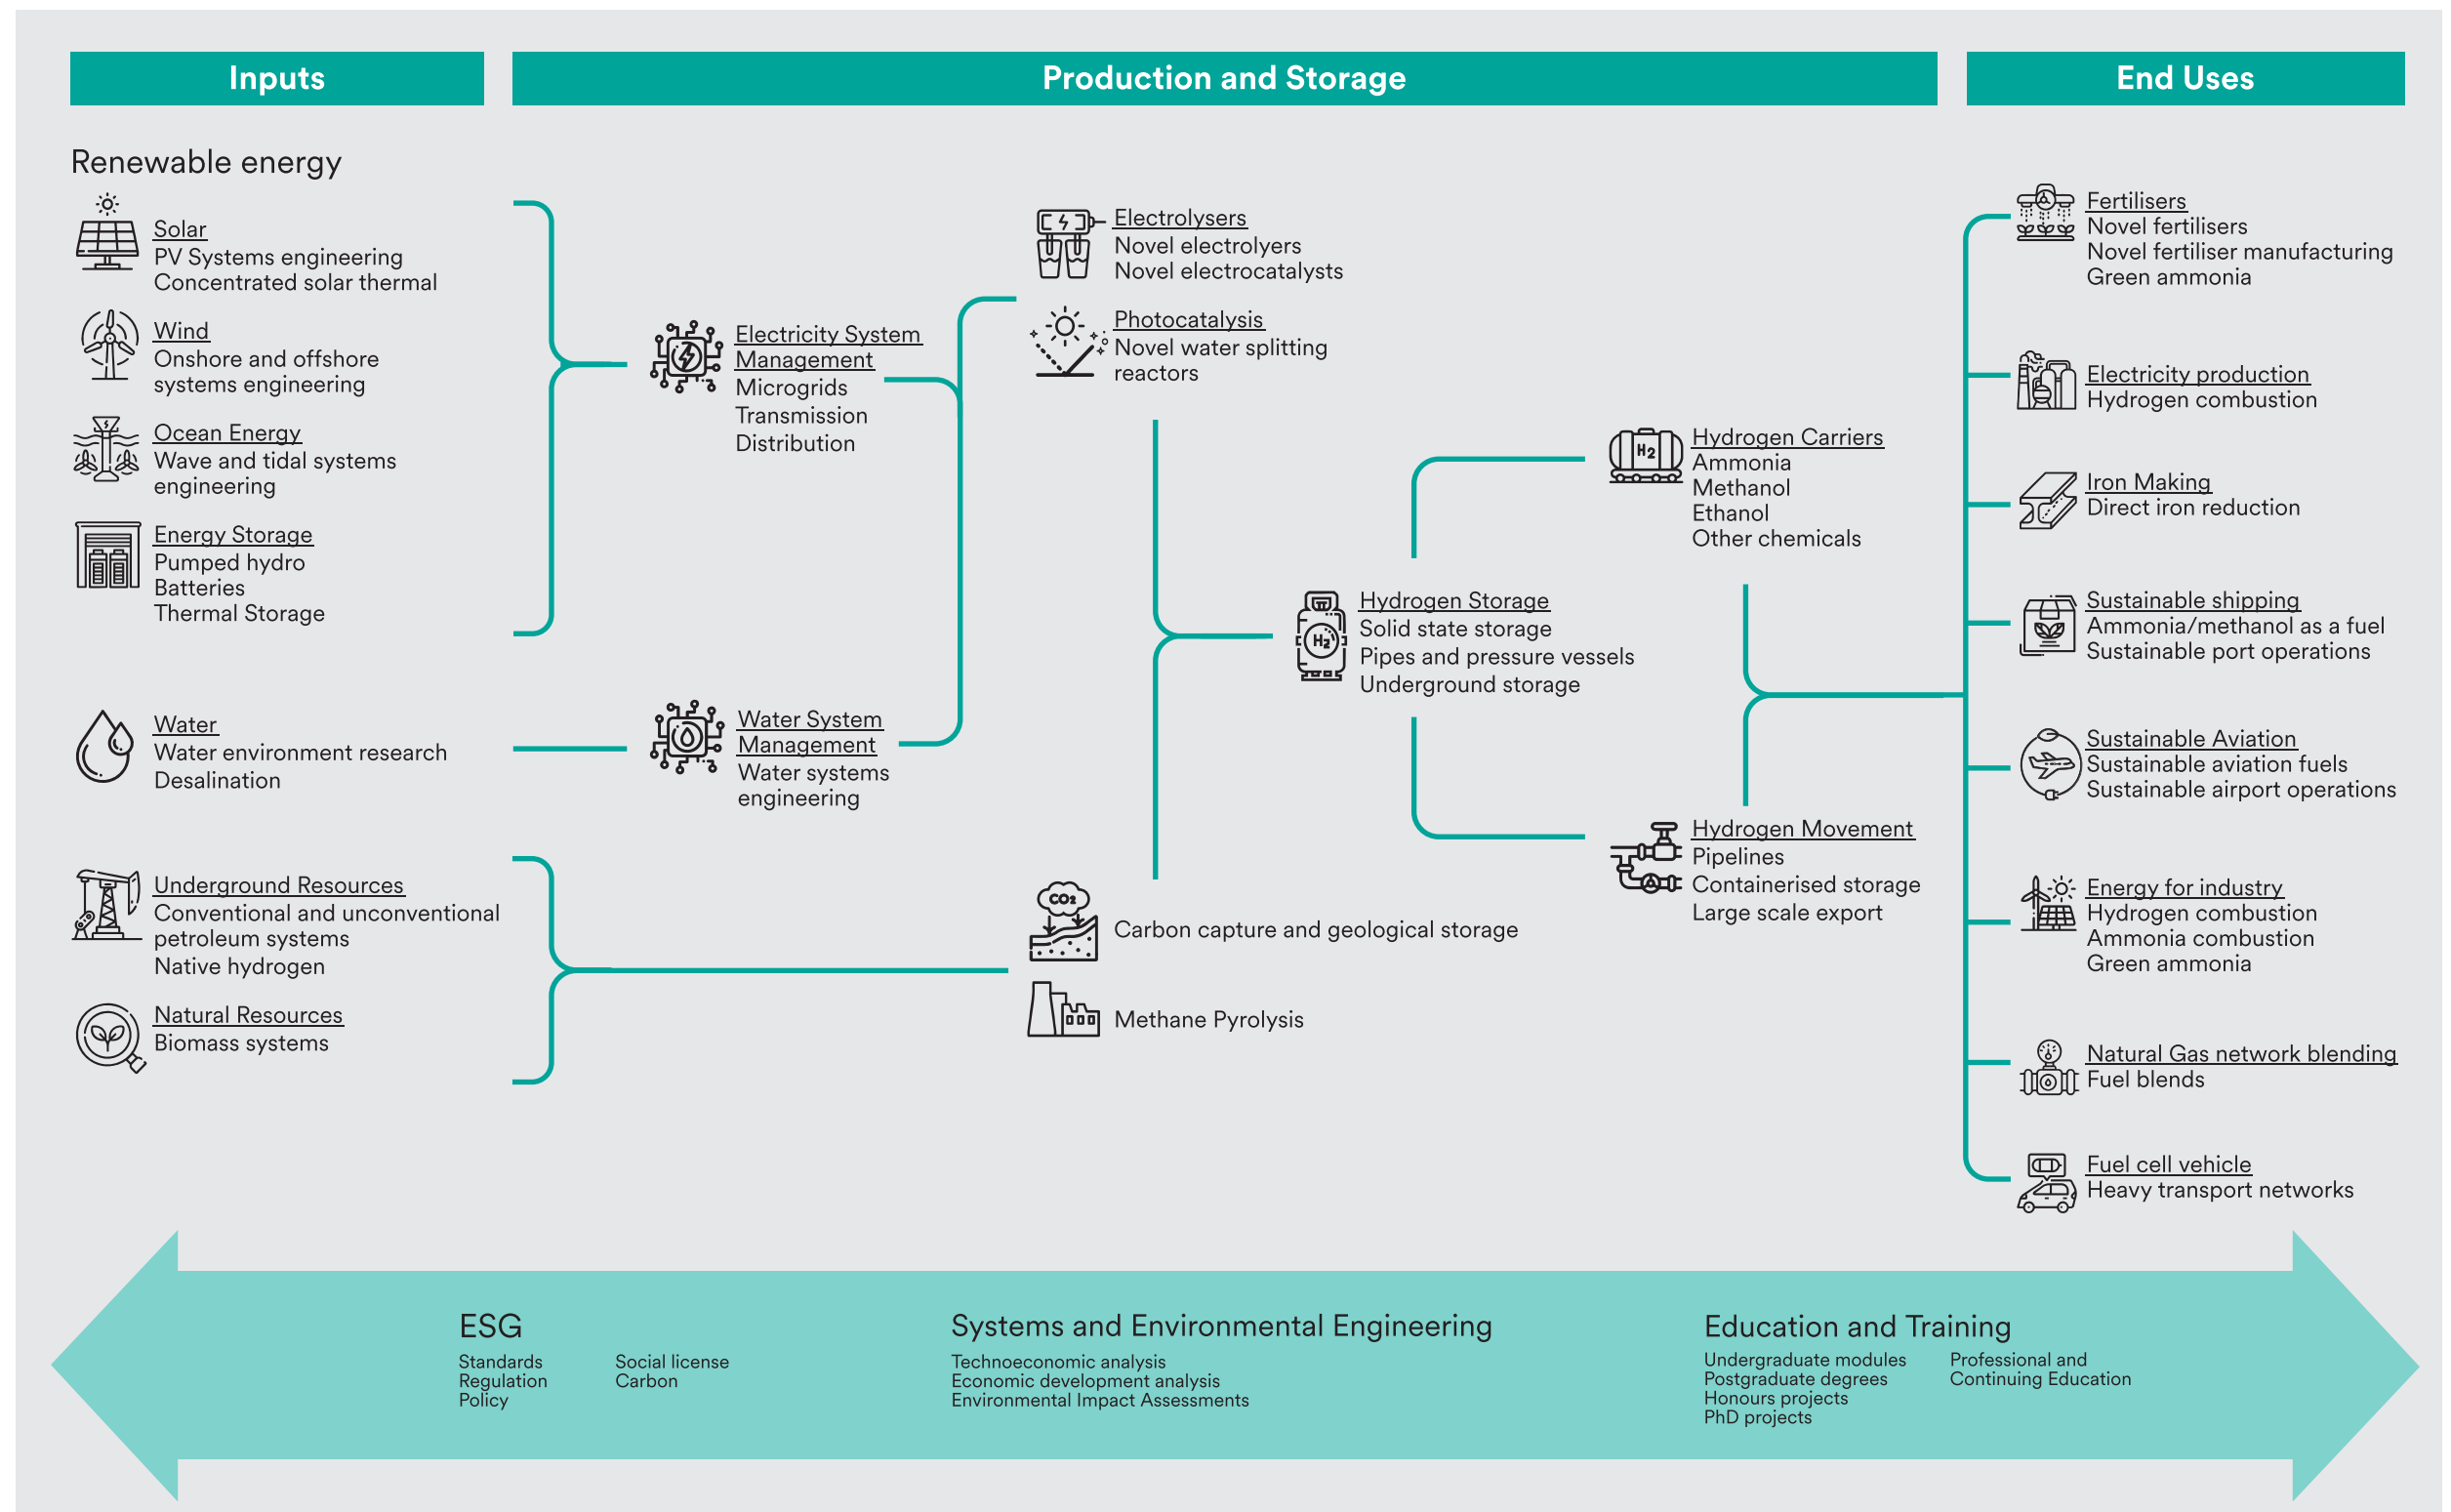

Institute for Sustainability, Energy and Resources

Hydrogen and its derivatives such as ammonia and sustainable fuels will be crucial to overcoming multiple challenges, such as decarbonising transport, heavy industry, agriculture and mineral processing.

Situated in one of the most progressive jurisdictions for renewable energy, the University of Adelaide continues to invest significant human, technological and financial resources in the transition to an energy future that will look very different to today.

A key part of that future will be hydrogen.

At the University we are working on innovations in producing, storing, moving and using hydrogen. We invite you to see where your interests and our capabilities intersect in the hydrogen value chain, and urge you to reach out to us to discuss how we can work together in the energy transition.
